SecureDocs Releases New Feature Series to Support Fundraising & The M&A Process

New feature enhances the SecureDocs customer's ability to track investor/buyer interest during deals as well as manage security settings more easily.

SANTA BARBARA, CALIFORNIA — March 3, 2016 — SecureDocs, an industry-leading [virtual data room provider](#) is excited to announce a new feature series to support fundraising & the M&A process. With this latest update, SecureDocs users can now track investor/buyer interest during deals as well as manage security settings more easily.

How will the New Features Help Users?

Fundraising/M&A

Maximize your opportunity to engage investors. Preview User Roles to see exactly what folders investors/buyers will see, make sure you're telling the whole story and not missing valuable detail. Ensure that the vision of your company you think you're providing matches what the user will see.

Increase investor/user engagement. Three invites automatically go out to users/investors over 2 week period to increase participation.

Track investor/user engagement status. Sort Users/investors according to invitation status (invited, email #1 or #2, accepted), or Last Login date to track engagement and take action.

Track investor/user engagement by role, or email address. Search function allows you flexibility to track and monitor groups of users based on common email address (in search box type in Microsoft for all users with MS extension), role template you have

created to correspond to a team (e.g. if you have a role called Apple Team, Andreessen Horowitz Team you can select it).

Hourly and daily activity audit log emails automatically sent to your team. Ensure your internal team has tools necessary to act according to investor/user activity.

Provide Directors Excel Snapshot of User Status and Activity and Role Setup. Download

Security

User/investor invitation times out after 2 weeks. The invitation expiration ensures that a user/investor doesn't access sensitive information after an event or leaving the company.

Preview User/Investor role ensures that administrators don't inadvertently provide too much information that could compromise a company.

Hacker Security. User/investor 2 factor authentication column identifies who is protected from hackers and who is not.

Unauthorized Investor/Employee Sharing Security Setup. Identifies which roles are enabled with watermarks traceable back to user to discourage unauthorized screen capture and sharing.

The changes we have made are not only designed to enhance user security and efforts around fundraising and merger and acquisition today, but to also provide a path to additional enhancements in the future to help our clients achieve the outcomes you desire.
